### CURVE SPECIFICATIONS

The specifications below qualify the curves shown on the following pages.

Tolerances according to ISO 9906:2012 - Grade 3B

The curves refer to effective speed of asynchronous motors at 50 Hz, 2 poles.

Measurements were carried out with clean water at 20°C of temperature and with a kinematic viscosity of  $\nu = 1 \text{ mm}^2/\text{s}$  (1 cSt)

The NPSH curve is an average curve obtained in the same conditions of performance curves.

The continuous curves indicate the recommended working range. The dotted curve is only a guide.

In order to avoid the risk of over-heating, the pumps should not be used at a flow rate below 10% of best efficiency point.

Symbols explanation:

- Q = volume flow rate
- H = total head
- $P_2$  = pump power input (shaft power)
- $\eta$  = pump efficiency
- NPSH = net positive suction head required by the pump
- MEI = minimum efficiency index

The minimum efficiency index (MEI) is a measure of the quality of a pump size in respect to its mean efficiency. The minimum efficiency index is based on the hydraulic efficiency and on the head at the best efficiency point.

The efficiency of a pump with trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.

The operation of these water pumps with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system.

MEI = 0.4 for Multistage Vertical 2900rpm

MEI=0.7 for Mutistage Vertical 2900 rpm

MD 32-250/5.5 (5.5 kW) MEI > 0.70 – Impeller diameter = 218 mm  
 MD 32-250/7.5 (7.5 kW) MEI > 0.70 – Impeller diameter = 240 mm  
 MD 32-250/9.2 (9.2 kW) MEI > 0.70 – Impeller diameter = 254 mm  
 MD 32-250/11 (11 kW) MEI > 0.70 – Impeller diameter = 265 mm

Rotation speed ≈ 2900 min<sup>-1</sup>  
 Test standard: ISO 9906:2012 - Grade 3B

MD 40-250/11 (11 kW) MEI > 0.70 – Impeller diameter = 236 mm  
 MD 40-250/15 (15 kW) MEI > 0.70 – Impeller diameter = 259 mm

Rotation speed ≈ 2900 min<sup>-1</sup>  
 Test standard: ISO 9906:2012 - Grade 3B

MD 50-250/15 (15 kW) MEI > 0.40 – Impeller diameter = 234 mm  
 MD 50-250/18.5 (18.5 kW) MEI > 0.40 – Impeller diameter = 248 mm  
 MD 50-250/22 (22 kW) MEI > 0.40 – Impeller diameter = 261 mm

Rotation speed ≈ 2900 min<sup>-1</sup>  
 Test standard: ISO 9906:2012 - Grade 3B
